A recombinant Adenylyl cyclase is described which lacks membrane bound domains. Separation and purification of the recombinant enzyme is much easier compared with wild type enzymes and the recombinant enzyme is more stable than the wild type enzymes which allows easier screening of compounds that stimulate and inhibit Adenylyl cyclase activity. The recombinant adenylyl cyclase comprises a chimera of adenylyl cyclase (1 and C_2 domains linked covalently. The domains may be linked by a linker peptide. The recombinant adenylyl cyclase is useful for screening inhibitors and stimulators of adenylyl cyclase activity. Inhibitors of the enzyme are useful for treating cholera, pitultary tumors, heart failure, ischaemia, endocrine disorders and cell necrosis. Stimulators of adenylyl cyclase are useful for treating pseudohypoparathyroidism and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                349

The present invention relates to methods and compositions for enhancing cardiac function in mammalian hearts by inserting transgenes encoding beta-adrenergic signalling proteins (beta-AsP) which increase beta-adrenergic responsiveness within the myocardium using in vivo gene therapy. The beta-ASPs of the invention include beta-adrenergic receptors (beta-AR), adenylylycyclases (also referred as adenylycyclase, adenylate cyclase and cAMP synthetase) and G-protein receptor kinase (GRK) inhibitors. The beta-ASP is used for enhancing cardiac function in mammalian heart failure. The present consequence encodes human partial cardiac adenylcyclase VI (ACVI) isoform which is used for generating a third beta-ASP transgene, used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   815
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 875

congestive heart ot gene therapy Fig 12A; 114pp; English for useful 60; Claim

from the present invention. The present invention describes a recombinant replication-defective viral particle (I) comprising a gene encoding a beta-adrenergic signalling protein (beta-ASP) operably linked to a promoter. Also described are: (1) a recombinant pro-viral plasmid (Ia) comprising a gene encoding a beta-ASP, as above, operably linked to a promoter and further comprising a replication-defective viral genome; (2) a (mammalian) cell transfected with (I) or (Ia); (3) an isolated polynucleotide comprising a sequence encoding a human adenylicyclase isoform VI (AC-VI), or a variant having AC activity; (4) a human AC-VI encoded by (3); (5) an isolated polynucleotide comprising the polynucleotide of (3); (1) can be used to form a comprising the polynucleotide of (3). (1) can be used to form a cardiac function in mammals. present sequence encodes human adenylylcyclase isoform VI The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence encodes the human type V adenylyl cyclase (hAC5) of the invention. hAC5 has a similar putative structure to other adenylyl cyclase isoforms but, like type VI, is distinguishable in that it has a larger N-terminus and a relatively shorter C-terminus as it lacks the C2D region. The hAC5 polypeptides are useful in assays that screen for potential therapeutic agents, which modulate hAC5 activity. These polypeptides are also useful in assays for the diagnosis of diseases and disorders. Agonists of hAC5 are useful control agents in such assays, and they may have useful effects in vivo for treating disease. Antibodies acting as (ant)agonists have diagnostic and therapeutic effects, and are useful in immunoassays for hAC5. (Anti)agonists are particularly useful in creating diseases caused by abnormal hAC5 activity (e.g. In the heart and brain), and in diseases, which are alleviated by modulating hAC5 activity. The oligonucleotides are useful in methods that inhibit or requilate hAC5 expression in vivo and in vitro. The cloning of the human isotype of AC5 enables the development of tissue-specific and selective pharmacological agents for use in treating particular human diseases second as a considered with hAC5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CGGAGGGGCGGCCCAGGCAAGGGCAAGGAGCTGGGGCTGCGGGCAGTGGCCCTGGGCTTC 273

Left ventricular tissue of canine heart was used as a source of mRNA. A cDNA library was prepd. in lambda gt10 phage. A 970 bp Aat-HincII fragment from type I adenylyl cyclase cDNA was used as probe. The clones isolated were used to obtain cDNA encoding CACV. This probe may also be used to screen a human cardiac cDNA library to obtain the cDNA encoding human CACV. CACV, its analogues and antibodies are useful in therapy or diagnostic assays, e.g. in modifying and determining cardiac function. A decrease in CACV content of the heart contributes to impaired cAMP prodn. and in heart failure. The CACV can also be used to screen for cpds. which stimulate or inhibit
                                                                                                                                                                                                                                              type
                                                                                                                                                                                                                                            solated nucleic acid mol. encoding Cardiac adenylyl cyclase - useful for determining and modifying cardiac function

Novel soluble mammalian polypeptide composition comprising adenylyl cyclase activity for screening stimulators and inhibitors of adenylyl cyclase, is activated by Gsalpha cyclase activity for cyclase, is activated

Disclosure; Columns 65-70; 73pp; English.

bound domains. Separation and purification of the recombinant enzyme is more stable than the wild type enzyme and the recombinant enzyme is more stable than the wild type enzyme which allows easier screening of compounds that stimulate and inhibit Adenylyl cyclase activity. The recombinant adenylyl cyclase comprises a chimera of adenylyl cyclase c_l and c_2 domains linked covalently. The domains may be linked by a linker peptide. The recombinant adenylyl cyclase is useful for screening inhibitors and stimulators of adenylyl cyclase activity. Inhibitors of the enzyme are useful for treating cholera, pituitary tumors, heart failure, ischaemia, endocrine disorders and cell necrosis. Stimulators of adenylyl cyclase activity processes. Stimulators of adenylyl cyclase activity processes activity and the enzyme are useful for cyclase are useful for treating pseudohypoparathyroidism and other recombinant Adenylyl cyclase is described which lacks membrane endocrine deficiencies.

Novel human adenylyl and guanylyl cyclases and polynucleotides encodi the cyclases, useful for treating, diagnosing or preventing cardiovascular, neurological, vision, reproduction and smooth muscle disorders

5; Page 112-113; 116pp; English Claim

The invention relates to human adenylyl and guanylyl cyclases (ADGUC) preferably ADGUC1-ADGUC5 and nucleic acid molecules encoding such preferably ADGUC1-ADGUC5 and nucleic acid molecules encoding such polypeptides. ADGUC sequences are useful in the diagnosis, prevention and treatment of cardiovascular disorders (e.g. angina pectoris, myocardial infarction, ischaemic heart disease, hypertension and atheroscleroscles), vision disorders (e.g. keraticis, iritis, cataract), neurological disorders (e.g. epilepsy, Alzheimer's disease, pick's disease, Huntington's disease, dementia, parkinson's disease, pick's disease, Huntington's disease, dementia, mental disorders including mood and anxiety and prion diseases including kuru), reproductive disorders (e.g. infertility, endometriosis, importence, uterine fibroid and gynaecomastia), smooth muscie disorders (e.g. arrhythmias, asthma and migraine) and bacterial infections.

ADGUC polynucleotides are useful for creating knock-in humanised animals or transpenic animals to model human diseases. They are useful in sommatic or generaline gene therapy. ADGUC polynucleotides are also useful to creating differences in the chromosomal location due to the individuals abcut on view or animals or addition inversion, etc. among normal, carrier or affected. individuals. ADGUC polypeptides are useful in a number of drug screening techniques and in vaccines. The present sequence is human ADGUC-2 cDNA.

Sequence 3137 BP; 553 A; 973 C; 1044 G; 567 T; 0 other;

Separation and purification of the recombinant enzyme is much easier compared with wild type enzymes and the recombinant enzyme is more stable than the wild type enzyme which allows easier screening of compounds that stimulate and inhibit Adenylyl cyclase activity. The recombinant adenylyl cyclase comprises a chimera of adenylyl cyclase (2 domains linked covalently. The domains may be linked by a linker peptide. The recombinant adenylyl cyclase is useful for screening inhibitors and stimulators of adenylyl cyclase activity. Inhibitors of the enzyme are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        soluble mammalian polypeptide composition comprising adenylyl se activity for screening stimulators and inhibitors of adenylyl

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                      APPLICANT: Tang, Wei-Jen
APPLICANT: Tang, Mei-Jen
TITLE OF INVENTION: SOLUBLE MAMMALIAN ADENYLYL CYCLASE
TITLE OF INVENTION: AND USES THEREFOR
NUMBER OF SEQUENCES: 31
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               COMPUTER FALABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: Floppy disk
COMPUTER: FLOPPY disk
COMPUTER: TBM PC compatible
COPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATENTIN Release #1.0, Version #1.30.
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/726,214
FILING DATE: CONCURTENTLY HERWITH
CLASSIFICATION: 435
PRIOR APPLICATION WHERE: US 60/005,498
FILING DATE: 04-OCT-1995

Patent No. US2000103147A1

GENERAL INFORMATION:

APPLICANT: Hammon, H. K.

APPLICANT: Ding, P.

APPLICANT: Gao, M.

TITLE OF INVENTION: GENE THERAPY FOR CONGESTIVE HEART

TITLE OF INVENTION: GENE THERAPY

FILE REFERENCE: 22000205673

CURRENT FILING DATE: 1990-10-12

PRIOR APPLICATION NUMBER: US 09/402,667

PRIOR FILING DATE: 1999-09-05

PRIOR FILING DATE: 1997-09-05

PRIOR FILING DATE: 1997-09-05

PRIOR PELING DATE: 1996-09-05

PRIOR FILING DATE: 1996-09-05
